Executive Summary

- Intel® Remote Keyboard is a new mobile app from Intel that allows users to use a mobile device to provide input to their Intel® Compute Stick or Intel® NUC.

- Intel Remote Keyboard mobile app was released on the Google Play Store on Friday June 19.

- The app has also been submitted to the Apple Store and is expected to complete the review process and be posted the week of June 30.

- The purpose of the app is to allow users of the Intel NUC and Intel Compute Stick products to control those computers using their Android or iOS based devices.

- The host app (the software that is needed on the computer to be controlled) is available from the Intel® Download Center and was designed for Windows 8.1

What is Intel® Remote Keyboard?

The simple way to provide input to your Intel® Compute Stick or Intel® NUC using your mobile device
